Week 1: Day 1 - Exercises

These are the exercises we will go through today. You will get time to try them out first, then we will do them together as a class.

1. Run *script.py* from your terminal (use the correct shebang!)

2. Pizza calculator script: Build a pizza calculator script.
     - use variables for all numbers!
     - this is the calculation to use for a pizza of radius z and height a
     $V = pi * z * z * a$
     - pi you can approximate with 22/7 or 3.14

3. Greeter program: Write a nice greeter program to say hello to yourself.
     - say hello, then ask for your name
     - use the input function
     - use the print function, print a greeting with the name
     - use an f-string

4. Replace within string: Take in a string with words separated by commas and replace the commas with spaces, then print out the resulting string
